Health care professionals and medical logisticians from humanitarian agencies and government ministries

Program Duration

12 hours over 3 weeks

Method

- Recorded presentations
- Short videos and podcasts
- Quizzes
- Facilitator-led virtual classroom seminars

Certificate

Kuehne Foundation Training Certificate

OBJECTIVE

With many different stakeholders, regulations and specific handling requirements, medical supply chains are dynamic and complex systems that face a myriad of challenges. In case of a pandemic such as COVID-19 further complexities and challenges are likely to occur.

A major root cause for inefficiencies, losses and waste in supply chains is simply insufficient knowledge. The Medical Logistics in Pandemics (MLP) aims to equip aid workers and health staff with the most essential logistics and supply chain knowledge in the context of medical operations. Special focus will be put on the current response to COVID-19 making sure that the right product and service reaches the patients at the right time, at the right condition and at the right price. This course is a fully blended learning experience that includes self-studying online lectures, challenging quizzes as well as interactive live sessions in a virtual classroom environment.

CONTENTS

Modules	Module 1	Module 2	Module 3
	Medical Supply Chains in the Humanitarian Context	Medical Supply Chain Good Practice	Navigating Supply Chains during a Pandemic
Sub-module 1	Introduction to Humanitarian Supply Chains	Good Manufacturing Practice (GMP) & Good Procurement Practice (GPP)	COVID-19 Supply Chain Challenges
